## Lay Language

abdomen belly, stomach

abdominal distention bloating

absorb take up fluids, take in

acid taste sour taste

acidosis condition when blood contains more acid than normal acuity clearness, keenness, esp. of vision and airways

acute new, recent, sudden, urgent

gall stones, which may cause upper abdominal pain and require

acute cholecystitis hospitalization and surgery adenopathy swollen lymph nodes (glands) adjuvant helpful, assisting, aiding, supportive

agent drug, medication albumin protein found in blood

allergic reaction rash, hives, swelling, trouble breathing

alopecia loss of hair

ambulate/ambulation/

ambulatory walk, able to walk analgesic pain-relieving drug

anaphylaxis serious, potentially life-threatening allergic reaction

build up of fluid throughout the whole body, which occurs in severely ill

anasarca people

low number of red blood cells, can causes tiredness and shortness of

anemia breath. May require a blood transfusion

a drug or agent used to decrease the feeling of pain, or eliminate the

anesthetic feeling of pain by putting you to sleep

angina chest pain due to decreased oxygen getting to the heart. anorexia disorder in which person will not eat; lack of appetite

antecubital related to the inner side of the forearm

antibody protein made in the body in response to foreign substance

anticonvulsant drug used to prevent seizures

antiemetic medication to prevent nausea/vomiting antilipemic a drug that lowers fat levels in the blood antimicrobial drug that kills bacteria and other germs

antiretroviral drug that works against the growth of certain viruses

antitussive a drug used to relieve coughing

aplastic anemia a disorder caused by decreased production of red blood cells

arrhythmia irregular heart beat

blood clot in an artery that blocks the artery. This could be serious and life

arterial thrombosis threatening

arterial catheter small tube placed in an artery

arthralgia joint pain

build up of fluid in the abdomen, which causes bloating and discomfort. This could require that the fluid be removed by a procedure called

ascites paracentesis

aspiration fluid entering the lungs, such as after vomiting

assay lab test

asthenia

-	
	a probability sample that is determined by randomly selecting clusters of
1	people from a population and subsequently selecting every person in each
cluster sample	cluster for inclusion in the sample
	having either a psychiatric disorder (e.g., psychosis, neurosis, personality
	or behavior disorders, or dementia) or a developmental disorder (e.g.,
l	mental retardation) that affects cognitive or emotional functions to the
cognitively impaired	extent that capacity for judgment and reasoning is significantly diminished
	a group of subjects initially identified as having one or more characteristics
cohort	in common who are followed over time
coma	unconscious state
	a method of providing experimental therapeutics prior to final FDA approval
compassionate use	for use in humans
	payment or medical care provided to subjects injured in research; does not
compensation	refer to payment (remuneration) for participation in research
	a legal term to indicate a personOs capacity to act on oneOs own behalf; a
	personÕs ability to understand information presented, to realize the
	consequences of acting (or not acting) on that information, and to make a
competence	choice.
complete response	total disappearance of disease
	  any factor that might serve as an alternative explanation for a studyÕs result
	confounding factors include non-randomized samples, selection bias, and
confounding factor	
confounding factor congenital	any arbitrary differences between people that are being compared.  present before birth
conjunctivitis	redness and irritation of the thin membrane that covers the eye
Conjunctivitis	treatment phase intended to make a remission permanent (follows
consolidation phase	induction phase)
constipation	difficulty passing stools
contract	an agreement
Contract	an agreement
	disadvantageous, perhaps dangerous; a treatment that should not be used
	in certain individuals or conditions due to risks. For instance, a drug may be
contraindicated	contraindicated for pregnant women and people with high blood pressure
	in many clinical trials, one group of patients will be given an experimental
	drug or treatment, while the control group is given either a standard
control group	treatment for the illness or a placebo
J. J	research study in which the experimental treatment or procedure is
controlled trial	compared to a standard (control) treatment or procedure
	a non-probability sample that is determined by selecting participants that
	are readily accessible (convenient) to the researcher, (examples in studies
	of Stanford students might include going to an organizational meeting or
	hanging out outside of rastall and asking students exiting the lunchroom to
convenience sample	take a survey)
cooperative group	association of multiple institutions to perform clinical trials
coronary	related to the blood vessels that supply the heart, or to the heart itself
_	a relationship where two variables are associated (this can be measured in
	terms of strength and direction using statistical tests) but not causally
correlational relationship	
	a type of clinical trial in which each subject experiences, at different times,
cross-over design	both the experimental and control therapy
culture	test for infection, or for organisms that could cause infection
cumulative	added together from the beginning

cutaneous relating to the skin debilitation weakened condition

debrief

giving participants previously undisclosed information about the research project following completion of their participation in research. In studies involving deception, if the participants are not informed of the deception in the informed consent, the IRB-SBS requires a signed debrief form for each

participant following completion of his/her participation in the study

the intentional withholding of information from participants, or deception about the studyÕs purpose and exact nature, that is deemed necessary by

deception the researcher in order to meet the studyÕs goals

dehydratelose water or body fluidsdermatitisskin irritation, rashdermatologicpertaining to the skindeterioratecondition to grow worse

refers to trials that are are conducted to find better tests or procedures for

diagnostic trials diagnosing a particular disease or condition

endoscopic examination examination of an internal part of the body with a lighted tube endpoint overall outcome that the protocol is designed to evaluate

enteral by way of the intestines

enzyme a chemical in the blood that causes chemical changes

The branch of medical science that deals with the study of incidence and

epidemiology distribution and control of a disease in a population.

epidural outside the spinal cord

epistaxis bloody nose

fair or just; used in the context of selection of participants to indicate that

equitable the benefits and burdens of research are fairly distributed

erythema redness of the skin

ethnographic research ethnography is the study of people and their cultures

evaluated, assessed examined for a medical condition

excrete discharge, pass

expanded access

hematoma hematuria blood clot blood in urine

investigator irradiation ischemia

the individual(s) designated to have the appropriate level of authority and responsibility to direct the research project and/or activity x-ray

prospective studies prosthesis

studies designed to observe outcomes or events that occur after the group of participants has been identified. prospective studies do not have to involve manipulation or intervention but may be purely observational or involve only the collection of data instead. artificial part, most often limbs, such as arms or legs name, address, elements of dates related to an individual (e.g., birthdate), email address, numbers; telephone, fax, social security, medical record, health beneficiary/health insurance, certificate or license numbers, vehicle, account numbers, characteristics, or codes (e.g., global positioning system (gps) readings), web urls, internet protocol (io) addresses, biometric

protected health information

a systematic investigation (i.e., the gathering and analysis of information)

research designed to develop or contribute to generalizable knowledge

resect remove or cut out surgically

difficulty breathing with low levels of oxygen in the blood, which could be

serious and life threatening and require you to have a tube inserted into

respiratory failure your windpipe that is hooked up to a machine to help you breathe

research participants, who fill out a survey, are interviewed, participate in

an experiment, are observed in a naturalistic setting, or who are otherwise

respondents studied

rhabdomyolysis rhabdomyolysis is a breakdown of muscle fibers.

rigors chills and shivering saline salt water solution

sample a subset of a given population used for research purposes

sarcoma a type of cancer screening examination, test

a data collection method in which an interviewer reads a standardized

interview schedule to the respondent and records the answers

a primary or secondary outcome used to judge the effectiveness of a

study endpoint treatment

stunned state in which it is difficult to get a response or the attention of the

stupor subject

structured interview

subclavian under the collarbone

subcutaneous under the skin supine lying on the back supine position lying on the back

supplement add

general medical care aimed at symptoms, not intended to improve or cure

supportive care underlying disease

> a study in which the same data are collected from all members of the sample using a highly structured questionnaire and analyzed using

statistical tests survey

syndrome a condition characterized by a set of symptoms

top number in blood pressure; pressure during active contraction of the

systolic heart

T-lymphocytes type of white blood cells

fast heart rate tachycardia

capable of causing malformations in a fetus (developing baby still inside the

motherÕs body) teratogenic male sex glands testes/testicles

> a general explanation about a specific behavior or set of events that is based on known principles and serves to organize related events in a

theory meaningful way

treatment intended and expected to alleviate a disease or disorder therapy

> Low number of platelets, which may cause bleeding and bruising. May require a blood transfusion. Bleeding may be serious or life threatening.

thrombosis clottina

thrombus blood clot

tinnitus ringing in the ears

a method for deciding on the strength of a drug or solution; gradually

titration increasing the dose on the surface topical

topical anesthetic

thrombocytopenia

any characteristic or trait that can vary from one person to another (race, variable sex, academic major) or for one person over time (age, political beliefs)

varices enlarged veins

vasospasm narrowing of the blood vessels

a carrier that can transmit disease-causing microorganisms (germs and

vector viruses)

venipuncture needle stick, blood draw, entering the skin with a needle

vertical transmission spread of disease visual disturbances inability to see properly.

free of coercion, duress, or undue inducement. Used in the research

context to refer to a subject's decision to participate (or to continue to

voluntary participate) in a research activity

persons who are wards of the state or any other agency, institution, or

ward
